

Sweatbox Loading and Running Guide

Follow the steps below to load a Sweatbox Session. Questions can be directed to Ryan Tardi at r.tardi@vatcan.ca.

Step 1:

Open EuroScope and in the **Connect dialog** Change the highlighted parameters which differ from a normal controlling session. For **Simulator server**, click the **Browse** button and navigate to the scenario file you wish to load.

Connect dialog

Select connection mode: Start Sweatbox simulator session

Server connection

Callsign: CYWG_GND Facility: Ground

Real name: Ryan Tardi Rating: Instructor 1

Step 2:

In the **OTHER SET > Display settings** menu, change the **Tag family** to **Matias (built in)**. It is recommended to also change the **Simulation mode** to **Easy ground**.

Display settings dialog

☒ Show squawk A+C aircraft

☐ Show squawk STBY aircraft

Number of history dots: 0

Do not display aircraft below: 0 ft

Do not display aircraft above: 0 ft

Leader line: 3 miles

☐ Show leader lines ☐ Show leader along the route

Tag family: Matias (built in)

Simulation mode: Easy ground

☐ Disable panning ☐ Disable zooming

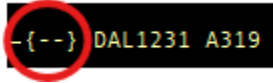

Rotate screen: 82.0 True north Magnetic north

☐ Hide planes inside my sector

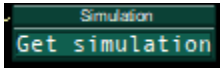

OK Cancel Apply

Step 3:

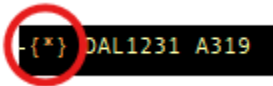

To manipulate an aircraft, double-click on the tag, which should reveal the following symbol:

Click again on the tag which should give you the option to *Get simulation*. Click that button.

The tag should now have the following characters prefixing the ACID and you should now be able to manipulate that aircraft. Due to limitations with Euroscope, you need to go through this process with each aircraft.

Step 4:

Refer to EuroScope documentation regarding how to specifically manipulate aircraft within the SweatBox session. You can access the documentation at:
<https://www.euroscope.hu/wp/running-a-simulator-session/>.
